

# Table of contents

*Detailed Contents are given at the start of the individual chapters.*

Foreword, by Morgan J. Hurley .....	iii
Preface .....	iv
Acknowledgements .....	v
<b>Chapter 1.</b> Introduction .....	1
<b>Chapter 2.</b> Terminology .....	13
<b>Chapter 3.</b> Fundamentals of combustion .....	24
<b>Chapter 4.</b> Ignition of gases and vapors .....	41
<b>Chapter 5.</b> Ignition of dust clouds .....	141
<b>Chapter 6.</b> Ignition of liquids .....	182
<b>Chapter 7.</b> Ignition of common solids .....	234
<b>Chapter 8.</b> Ignition of elements .....	352
<b>Chapter 9.</b> Self-heating .....	367
<b>Chapter 10.</b> Explosives, pyrotechnics and reactive substances .....	444
<b>Chapter 11.</b> Characteristics of external ignition sources.....	497
<b>Chapter 12.</b> Preventive measures .....	591
<b>Chapter 13.</b> Special topics .....	609
<b>Color Plates.</b> .....	637
<b>Chapter 14.</b> Information on specific materials and devices.....	675
<b>Chapter 15.</b> Tables .....	1022
<b>Index.</b> .....	1081

# Chapter 1. Introduction

<b>Background .....</b>	<b>1</b>
<b>Fire ignition statistics.....</b>	<b>2</b>
<b>The fire triangle and taxonomy of ignitions.....</b>	<b>6</b>
<i>Some complications of definition.....</i>	<i>8</i>
<i>Types of combustion and combustion-like reactions.....</i>	<i>8</i>
<b>Apparatus-dependent nature of ignition.....</b>	<b>9</b>
<b>The probabilistic nature of ignition and negative proof.....</b>	<b>9</b>
<b>Comments to the fire investigator .....</b>	<b>10</b>
<b>Computer methods .....</b>	<b>11</b>
<b>References .....</b>	<b>12</b>

# Chapter 2. Terminology

**Terms used in this book .....13**  
**Definitions .....13**  
**Abbreviations and acronyms.....20**  
**References .....22**

## Chapter 3. Fundamentals of combustion

<b>Introduction.....</b>	<b>24</b>
<b>Thermochemistry .....</b>	<b>24</b>
<i>Heat of combustion.....</i>	<i>25</i>
<i>Constant-volume heat of combustion.....</i>	<i>27</i>
<i>Effective heat of combustion; heats of explosion and detonation.....</i>	<i>28</i>
<i>Relations between fuel and air.....</i>	<i>28</i>
<i>Adiabatic flame temperature .....</i>	<i>30</i>
<b>Reaction kinetics .....</b>	<b>32</b>
<i>Branching chain reactions.....</i>	<i>33</i>
<i>Autocatalytic reactions.....</i>	<i>34</i>
<b>Flame speed.....</b>	<b>35</b>
<b>Types of explosions .....</b>	<b>36</b>
<i>Pressure piling.....</i>	<i>37</i>
<i>Deflagration to detonation transition.....</i>	<i>38</i>
<b>Catalytic combustion.....</b>	<b>38</b>
<b>Tests for fundamental combustion properties .....</b>	<b>39</b>
<b>Further readings .....</b>	<b>39</b>
<b>References.....</b>	<b>39</b>

## Chapter 4. Ignition of gases and vapors

<b>Highlights and summary of practical guidance .....</b>	<b>43</b>
<b>Exothermic reactions in gases .....</b>	<b>44</b>
<i>Slow oxidation.....</i>	<i>44</i>
<i>Cool flames.....</i>	<i>45</i>
<i>Multiple ignition temperatures.....</i>	<i>45</i>
<b>Autoignition of premixed gases .....</b>	<b>46</b>
<i>Theory .....</i>	<i>46</i>
Ignition of specific fuels.....	53
<i>Experimental determination of the AIT.....</i>	<i>54</i>
<i>Variables affecting the AIT .....</i>	<i>55</i>
Molecular structure.....	55
Fuel concentration.....	56
Pressure.....	57
Oxygen concentration.....	57
Vessel size and operating conditions.....	58
Wall material.....	59
Flow velocity and turbulence .....	59
<i>Other relations.....</i>	<i>60</i>
<i>AIT of mixtures.....</i>	<i>60</i>
<i>Ignition time .....</i>	<i>60</i>
Effect of fuel type and mixture composition .....	61
Effect of pressure .....	63
Effect of flow rate .....	63
<i>Sub-ignition, two-stage, and multi-stage ignitions.....</i>	<i>63</i>
<i>Ignition due to compression or shock.....</i>	<i>64</i>
<b>Piloted ignition of premixed gases .....</b>	<b>65</b>
<i>Ignition with the presence of excited species.....</i>	<i>65</i>
Spark ignition phenomema.....	65
Theories for spark ignition, MIE, and quenching distance.....	66
Ignition from breaking wires or moving contacts .....	70
Pilot flame ignition.....	73
Ignition by burning particles .....	74
<i>Variables affecting ignition of gases when piloted with the presence of excited species.....</i>	<i>74</i>
Chemical nature of the fuel.....	74
Oxygen concentration.....	75
Diluents.....	75
Fuel concentration.....	76
Temperature.....	77
Pressure.....	78
Gravity .....	78
Test geometry.....	79
Mixture velocity and turbulence .....	79

Wall materials .....	79
Circuit topology .....	79
Spark duration .....	80
Electrode arrangement.....	81
Electrode materials.....	83
<i>Ignition in the absence of excited species and hot-wire ignitions of all types.....</i>	<i>83</i>
Hot surface ignition and catalytic effects .....	83
Fused wire ignition.....	94
Ignition by hot, non-flaming gases and MESG.....	96
<i>Ignition by laser energy.....</i>	<i>101</i>
Direct thermal heating of gas.....	101
Photochemical excitation of gas.....	101
Laser-induced breakdown of gas .....	101
Radiative heating of small particles in the atmosphere.....	102
Laser-induced breakdown of gas aided by presence of small particles.....	104
<b>Flammability limits .....</b>	<b>104</b>
<i>Theory .....</i>	<i>107</i>
<i>Flammability limits in mass units .....</i>	<i>108</i>
<i>Estimation of flammability limits.....</i>	<i>109</i>
<i>Flammability limits for mixtures .....</i>	<i>111</i>
<i>Variables affecting flammability limits.....</i>	<i>112</i>
Oxygen concentration .....	112
Pressure.....	112
Temperature .....	114
Velocity .....	116
Gravity .....	116
Turbulence and sloshing.....	116
Measuring apparatus .....	116
Ignition source.....	118
Additives.....	118
<i>Minimum oxygen concentration for flammability.....</i>	<i>118</i>
<b>Unified theories of gas ignition.....</b>	<b>120</b>
<b>Ignition of non-premixed gases.....</b>	<b>120</b>
<b>Initiation of gaseous detonations.....</b>	<b>121</b>
<i>Minimum energy for detonation .....</i>	<i>123</i>
<i>Detonation limits .....</i>	<i>123</i>
<b>Tests for ignition properties of gases .....</b>	<b>123</b>
<i>Autoignition temperature .....</i>	<i>123</i>
Early methods .....	123
Heated tube tests.....	124
Tests primarily for liquids .....	124
Other test methods .....	124
<i>Heated-surface ignition.....</i>	<i>124</i>
<i>Flammability limits.....</i>	<i>124</i>
Bureau of Mines flammability tube.....	124
ASTM E 681 .....	125
Proposed EN method.....	126
ASTM E 918 .....	126
ASTM E 2079 .....	126

UL tests .....	126
Research tests .....	126
<i>Minimum ignition energy</i> .....	127
ASTM E 582 test.....	127
<i>Quenching distance</i> .....	127
<i>MESG</i> .....	128
IEC/PTB and HSE 20 mL spheres.....	128
Westerberg apparatus (UL).....	128
<b>Further readings</b> .....	<b>128</b>
<b>References</b> .....	<b>128</b>

## Chapter 5. Ignition of dust clouds

<b>Highlights and summary of practical guidance .....</b>	<b>142</b>
<b>General principles .....</b>	<b>143</b>
<b>Chemistry of combustion .....</b>	<b>144</b>
<b>Flammability limits .....</b>	<b>145</b>
<i>Lower flammability limits.....</i>	<i>145</i>
<i>Upper flammability limit .....</i>	<i>148</i>
<b>AIT, quenching distance and MESG.....</b>	<b>148</b>
<b>Theory of ignition of dust clouds .....</b>	<b>149</b>
<b>Hybrid gas/dust-cloud ignitions .....</b>	<b>151</b>
<b>Ignition sources for dust clouds.....</b>	<b>152</b>
<i>Mechanical sparks.....</i>	<i>153</i>
<i>Electric sparks.....</i>	<i>153</i>
<i>Hot surfaces .....</i>	<i>153</i>
<i>Glowing nests .....</i>	<i>153</i>
<i>Others .....</i>	<i>154</i>
<b>Clouds of powdered fibers (flock).....</b>	<b>154</b>
<b>Analysis and application of data.....</b>	<b>154</b>
<i>Variables affecting the AIT .....</i>	<i>154</i>
Dust concentration .....	154
Volatile content.....	154
Particle diameter.....	155
Moisture.....	156
Oxygen concentration.....	156
Residence time .....	156
Turbulence.....	156
Test apparatus volume .....	157
<i>Variables affecting the flammability limits .....</i>	<i>157</i>
Probability level used for the definition of the LFL.....	157
Particle diameter.....	157
Temperature.....	158
Pressure.....	158
Moisture.....	158
Oxygen concentration.....	159
Igniter energy supplied .....	159
<i>Variables affecting the MIE.....</i>	<i>161</i>
Dust concentration .....	161
Particle diameter.....	161
Temperature.....	162
Pressure.....	162
Moisture.....	162
Oxygen concentration.....	162
Turbulence.....	163

Charge on particles.....	163
Spark electrodes: material and gap size .....	163
Spark circuit parameters.....	163
Air velocity and turbulence.....	166
Test vessel size .....	166
<i>Risk management based on the MIE.....</i>	<i>167</i>
<i>Diluting with inert gases .....</i>	<i>167</i>
<i>Diluting with inert dusts.....</i>	<i>169</i>
<b>Tests for ignition properties of dust clouds .....</b>	<b>170</b>
<i>ASTM E 1491 .....</i>	<i>170</i>
<i>ASTM E 2019 .....</i>	<i>170</i>
<i>Godbert-Greenwald furnace .....</i>	<i>171</i>
<i>Bureau of Mines 1.2 L furnace.....</i>	<i>171</i>
<i>BAM oven .....</i>	<i>171</i>
<i>Hartmann apparatus.....</i>	<i>172</i>
<i>Bureau of Mines 6.8 L chamber .....</i>	<i>173</i>
<i>Spheres and other 20 L chambers .....</i>	<i>173</i>
<i>Nordtest 15 L apparatus.....</i>	<i>175</i>
<i>1 m<sup>3</sup> spheres.....</i>	<i>175</i>
<i>ASTM E 1232 .....</i>	<i>175</i>
<i>IEC 61241-2-3/Mike 3 .....</i>	<i>175</i>
<i>CMI mechanical impact test.....</i>	<i>176</i>
<b>Further readings .....</b>	<b>176</b>
<b>References.....</b>	<b>177</b>

## Chapter 6. Ignition of liquids

<b>Highlights and summary of practical guidance .....</b>	<b>183</b>
<b>Accidental ignitions of liquids .....</b>	<b>184</b>
<b>Properties of liquids .....</b>	<b>184</b>
<b>Autoignition of liquids .....</b>	<b>186</b>
<i>Ignition of single drops.....</i>	<i>187</i>
<i>Liquid aerosols or sprays.....</i>	<i>190</i>
<b>Flash point and fire point .....</b>	<b>192</b>
<i>Flash point.....</i>	<i>192</i>
<i>Upper flash point.....</i>	<i>193</i>
<i>The fire point .....</i>	<i>193</i>
<i>The pre-flash 'halo' .....</i>	<i>194</i>
<i>The distribution of fuel vapors above the surface .....</i>	<i>194</i>
<i>Estimations of flash point.....</i>	<i>196</i>
<i>Flash points of mixtures.....</i>	<i>198</i>
Ideal mixtures.....	199
Non-ideal mixtures.....	199
Mixtures with halogenated components.....	200
Flash points of petroleum distillates.....	202
<i>Relation between flash point and MIE.....</i>	<i>202</i>
<b>Piloted ignition of liquids .....</b>	<b>202</b>
<i>Spark ignition of liquid aerosols or sprays .....</i>	<i>202</i>
Minimum ignition energy .....	203
High flash-point liquids.....	205
Limits of flammability for liquid aerosols.....	206
<i>MESG of liquid aerosols.....</i>	<i>207</i>
<i>Hot surface ignition of droplets, sprays or spills.....</i>	<i>207</i>
Single droplets of a pure fuel .....	207
Hot engine surfaces and related problems.....	209
<i>Pools .....</i>	<i>213</i>
Pools at or above their flash point.....	213
Pools below their flash point.....	215
<b>Ignition of fuel in closed vessels.....</b>	<b>215</b>
<i>Effect of vapor/liquid volume ratio.....</i>	<i>216</i>
<i>Effect of slosh.....</i>	<i>217</i>
<b>Radiant ignition of liquids.....</b>	<b>217</b>
<i>Thick layers .....</i>	<i>217</i>
<i>Thin layers.....</i>	<i>218</i>
<b>Ignition of liquids by other means .....</b>	<b>219</b>
<b>Tests for ignition properties of liquids.....</b>	<b>219</b>
<i>Autoignition temperature .....</i>	<i>219</i>
Early test methods .....	219
ASTM D 286.....	221

ASTM D 2155 .....	222
ASTM E 659 .....	222
Other Bureau of Mines tests.....	223
<i>Flash point</i> .....	223
ASTM D 56 .....	224
ASTM D 92 .....	225
ASTM D 93 .....	225
ASTM D 1310 .....	225
ASTM D 3278 .....	225
ASTM D 3828 .....	226
ASTM D 3934 .....	226
ASTM D 3941 .....	226
Abel flash point test .....	226
<i>Tests for other properties</i> .....	226
ASTM D 4206 test for sustained burning .....	226
Hydraulic fluid sprays.....	226
<b>Further readings</b> .....	<b>227</b>
<b>References</b> .....	<b>227</b>

## Chapter 7. Ignition of common solids

<b>Highlights and summary of practical guidance .....</b>	<b>237</b>
<b>Types of ignition .....</b>	<b>238</b>
<b>General principles of flaming ignition .....</b>	<b>238</b>
<i>Qualitative features.....</i>	<i>238</i>
<i>The ignition problem for solids.....</i>	<i>239</i>
<b>Research into ignition of solids.....</b>	<b>241</b>
<i>Ignition temperature as ignition criterion.....</i>	<i>243</i>
<i>Mass loss rate as ignition criterion.....</i>	<i>246</i>
<i>HRR as an ignition criterion.....</i>	<i>248</i>
<i>Other criteria for ignition.....</i>	<i>249</i>
<b>Ignition from radiant heating.....</b>	<b>250</b>
<i>Gas phase events.....</i>	<i>250</i>
<i>Cool flames.....</i>	<i>250</i>
<i>Comprehensive theories.....</i>	<i>251</i>
Atreya's model .....	254
<i>Engineering treatments for thermally thick solids.....</i>	<i>256</i>
Development of approximate solutions .....	257
Janssens' procedure .....	260
Quintiere's procedure .....	262
Tewarson's procedure .....	264
Other data treatment procedures.....	264
Relation between minimum and critical fluxes .....	265
<i>Engineering treatments for thermally thin solids.....</i>	<i>265</i>
Condition 1—back face insulated.....	266
Condition 2—back face cooled .....	267
Condition 3—back face also heated .....	268
Other issues for thin slabs.....	268
<i>Illustrative data.....</i>	<i>268</i>
<i>Composite materials.....</i>	<i>269</i>
<i>Criteria for distinguishing thermally thick versus thin materials.....</i>	<i>271</i>
<i>General and intermediate-thickness materials.....</i>	<i>272</i>
<i>Energy needed for ignition.....</i>	<i>274</i>
<i>Laser ignition.....</i>	<i>275</i>
<b>Ignition from convective heating or immersion in a hot environment.....</b>	<b>277</b>
<i>Ignition theories for convective heating.....</i>	<i>280</i>
Lumped-capacitance model.....	280
Thermally-thick solid—constant heat flux .....	280
Thermally-thick solid—constant convective transfer coefficient.....	280
Thermally-thick solid—boundary layer solution.....	281
<i>Ignition theories for submersion in hot environments.....</i>	<i>281</i>
<b>Theoretical solutions for other problem conditions.....</b>	<b>281</b>
<i>Thermally-thick inert solid with fixed net heat flux.....</i>	<i>282</i>
<i>Thermally-thick inert solid with fixed heat flux and convective cooling.....</i>	<i>282</i>
<i>Thermally-thick reactive solid with fixed heat flux.....</i>	<i>282</i>

<i>Finite-thickness inert plate with fixed heat flux</i> .....	283
<i>Finite-thickness reactive plate</i> .....	283
<i>Finite-thickness polymer undergoing charring</i> .....	283
<i>Thermally-thick reactive solid held at a fixed face temperature indefinitely</i> .....	284
<i>Thermally-thick reactive solid held at a fixed face temperature for a finite time</i> .....	284
<i>Thermally-thick reactive solid receiving fixed radiant heat flux only</i> .....	284
<i>Solid receiving a brief, high-intensity pulse of radiation</i> .....	285
<i>Porous solids</i> .....	285
<i>Diathermanous solids</i> .....	285
<i>Miscellaneous geometries</i> .....	285
<i>Depletion of reactants not ignored</i> .....	285
<b>Ignition from localized sources</b> .....	<b>286</b>
<i>Small flames</i> .....	286
<i>Small-diameter, high-intensity heat sources</i> .....	287
<i>Hot bodies</i> .....	287
<b>Ignition from large flames</b> .....	<b>289</b>
<b>Duration of ignited burning</b> .....	<b>290</b>
<i>Flashing vs. sustained flaming</i> .....	290
<i>Sustained flaming after initial ignition</i> .....	290
<b>Variables affecting ignition of solids</b> .....	<b>292</b>
<i>Type of pilot (or lack thereof)</i> .....	292
<i>Orientation</i> .....	294
<i>Exposed area size</i> .....	295
<i>Air flow rate</i> .....	297
<i>Oxygen concentration</i> .....	299
<i>Piloted ignition</i> .....	299
<i>Autoignition</i> .....	300
<i>Chemical composition of diluents</i> .....	300
<i>Total pressure</i> .....	301
<i>Moisture and relative humidity</i> .....	302
<i>Initial temperature of specimen</i> .....	304
<i>Acceleration of gravity</i> .....	304
<i>Surface absorptivity, material transparency, surface coatings,</i> <i>and spectral characteristics of the radiant source</i> .....	305
<i>Polymer structure</i> .....	308
<i>Porosity</i> .....	308
<i>Fire retardants</i> .....	308
<i>Movement of the surface</i> .....	309
<i>Surface roughness</i> .....	310
<i>Ignitability of aged, degraded, or charred materials</i> .....	310
<i>Wetting by water</i> .....	310
<i>Type of apparatus</i> .....	311
<i>Mass of sample</i> .....	311
<i>Long-term radiant exposures</i> .....	312
<b>Arcing across a carbonized path</b> .....	<b>312</b>
<b>Glowing ignition</b> .....	<b>315</b>
<b>Smoldering ignition</b> .....	<b>315</b>
<i>Theory</i> .....	318
<i>Effect of layer thickness</i> .....	318

<i>Effect of packing density or porosity</i> .....	318
<i>Smolder promoters and smolder inhibitors</i> .....	318
<i>Transition from smoldering to flaming ignition</i> .....	319
<i>Indicators of smoldering</i> .....	320
<b>Tests for ignition properties of solids</b> .....	<b>320</b>
<i>Flame ignition tests</i> .....	320
ASTM D 2859 methenamine pill test .....	321
CS 191-53 (16 CFR 1610) flammable fabrics test.....	321
FF-3-71 (16 CFR 1615) and FF-5-74 (16 CFR 1616) children’s sleepwear tests .....	322
CPSC 16 CFR 1500.44 flammable solids test .....	322
NFPA 701 and NFPA 705 methods.....	322
ASTM D 1692 .....	322
UL 94 test series .....	323
UL end-product tests .....	326
Small-flame tests for wire and cable.....	327
MVSS 302 .....	328
FAR Bunsen burner test .....	328
ISO 11925-2 small flame test .....	329
Large-flame tests .....	329
<i>Radiant ignition tests</i> .....	330
The Cone Calorimeter .....	330
ISO 5657.....	331
ASTM E 1321 (LIFT).....	331
FM Fire Propagation Apparatus—ASTM E 2058 .....	332
ASTM E 1623 (ICAL).....	333
<i>Arc tracking and arc ignition tests</i> .....	333
ASTM D 495 .....	333
ASTM D 2303 .....	333
ASTM D 3032 .....	334
ASTM D 3638 .....	334
MIL-STD-2223.....	334
UL tests.....	334
<i>Electric spark or arc ignition</i> .....	334
Bureau of mines electric spark method.....	334
Nordtest NT Fire 016 method.....	335
NIST electric arc method.....	335
<i>Smoldering</i> .....	335
Cellulose insulation .....	335
Mattress tests .....	335
<i>Burning brand ignition</i> .....	335
ASTM E 108 roof test .....	335
<i>Other types of tests</i> .....	336
Convective heating tests .....	336
Hot wire or bar ignition tests .....	336
Hot rivet or nut tests .....	336
Setchkin furnace, ASTM D 1929 .....	336
Limiting oxygen index (LOI), ASTM D 2863.....	338
Thermal analysis tests.....	338
<b>Further readings</b> .....	<b>338</b>
<b>References</b> .....	<b>339</b>

## Chapter 8. Ignition of elements

<b>Highlights and summary of practical guidance .....</b>	<b>352</b>
<b>Ignition of metals .....</b>	<b>353</b>
<i>General principles .....</i>	<i>353</i>
<i>Theories .....</i>	<i>356</i>
Theories for a single, isolated mass .....	356
Theories for metal dust layers.....	358
<i>Effect of oxygen concentration .....</i>	<i>359</i>
<i>Effect of pressure .....</i>	<i>359</i>
<i>Effect of flow velocity.....</i>	<i>359</i>
<i>Effect of moisture.....</i>	<i>359</i>
<b>Ignition of carbon.....</b>	<b>359</b>
<i>Graphite and other relatively pure forms of carbon.....</i>	<i>359</i>
<i>Coal, coke, and other relatively impure forms of carbon.....</i>	<i>360</i>
Single particles .....	360
Dust clouds .....	363
<b>Test methods .....</b>	<b>364</b>
<b>References.....</b>	<b>364</b>

## Chapter 9. Self-heating

<b>Highlights and summary of practical guidance .....</b>	<b>369</b>
<b>Introduction .....</b>	<b>371</b>
<b>Basic phenomena .....</b>	<b>373</b>
<b>Theory of self-heating.....</b>	<b>374</b>
<i>Steady-state theory for symmetrically cooled bodies.....</i>	<i>377</i>
Peak temperatures under subcritical conditions .....	379
Bodies of other shapes.....	380
<i>Steady state theory for unsymmetrically cooled bodies.....</i>	<i>382</i>
Infinite slab.....	382
Hollow infinite cylinder .....	383
<i>Steady-state theory including oxygen diffusion.....</i>	<i>383</i>
<i>Steady-state theory including fuel depletion.....</i>	<i>384</i>
<i>Correction for low activation energy.....</i>	<i>385</i>
<i>More complex reactions .....</i>	<i>386</i>
<i>Hot work, cold work, and hot spots.....</i>	<i>387</i>
Hot work.....	387
Cold work.....	389
Inert hot spots.....	390
Reactive hot spots.....	390
Applied heat flux.....	391
<i>Transient theory.....</i>	<i>391</i>
Estimating time to criticality .....	391
Linearly increasing surface temperature.....	394
More advanced models.....	394
<b>Applications.....</b>	<b>395</b>
<i>Ignition from self-heating .....</i>	<i>395</i>
<i>Effects of different variables on self-heating.....</i>	<i>395</i>
Chemical and physical nature of the substance .....	395
Pile size and shape, and porosity of the substance .....	395
Particle size .....	396
Temperature .....	396
Time of storage.....	396
Access of air .....	396
Oxygen concentration.....	397
Insulation.....	398
Multiple packing .....	398
Moisture and rain .....	398
Density .....	400
Antioxidants .....	400
Contaminants.....	400
Multiple-component substances .....	401
<i>Ignition of dust layers.....</i>	<i>401</i>
Electrical heating problems .....	402
<i>Hot spots.....</i>	<i>402</i>
<i>Self-heating in liquids.....</i>	<i>403</i>
<i>Liquid-soaked porous solids .....</i>	<i>403</i>

<i>Detonation or deflagration upon self-heating</i> .....	404
<i>Preventive measures</i> .....	404
<b>Tests for self-heating or reactivity</b> .....	<b>405</b>
<i>Real-scale tests</i> .....	406
UN Test H1—The US SADT test .....	406
<i>Geometric-scaling tests</i> .....	406
Scaling according to Frank-Kamenetskii theory.....	406
Oven-basket tests: FRS method.....	406
Oven-basket tests: crossing point methods .....	414
Oven-basket tests: Nordtest method.....	417
Oven-basket tests: IMO test.....	417
Oven-basket tests: UN Test N4 .....	418
Hotplate tests.....	418
Scaling according to Semenov theory .....	420
General Dewar flask testing .....	420
UN Test H2—Adiabatic storage test .....	421
UN Test H4—Heat accumulation storage test .....	422
<i>Calorimeter tests</i> .....	422
Adiabatic calorimeters .....	423
Isothermal calorimeters .....	425
ARC and APTAC tests .....	425
Other industrial reaction calorimeters.....	428
<i>Thermal analysis methods</i> .....	428
DTA, DSC, and related techniques.....	429
Simple screening test based on DSC .....	430
Quantitative ASTM procedures .....	431
ASTM E 698 .....	431
ASTM E 793 .....	431
ASTM E 1641 .....	431
ASTM E 1231 .....	432
Qualitative ASTM procedures .....	432
UN Test H3—Isothermal storage test.....	432
<i>Empirical or qualitative tests</i> .....	433
Mackey test and related tests .....	433
Ordway test .....	433
Mackey test .....	433
ASTM E 771 test .....	434
ASTM E 476.....	434
UN Test O1 for oxidizing solids.....	434
UN Test O2 for oxidizing liquids .....	435
UN Test S1—Trough test for fertilizers containing nitrates.....	435
<i>Bureau of Mines dust layer ignition temperature test</i> .....	435
<i>Oxygen consumption calorimetry</i> .....	435
<b>Further readings</b> .....	<b>436</b>
<b>References</b> .....	<b>436</b>

# Chapter 10. Explosives, pyrotechnics and reactive substances

<b>Highlights and summary of practical guidance .....</b>	<b>445</b>
<b>Unstable substances.....</b>	<b>446</b>
<i>Heat of formation .....</i>	<i>447</i>
<i>Heat of decomposition .....</i>	<i>447</i>
<i>Self-heating of liquids.....</i>	<i>448</i>
Theory .....	449
Experimental studies.....	451
<i>Self-heating of solids.....</i>	<i>451</i>
<b>Runaway exothermic reactions.....</b>	<b>451</b>
<b>Reactive substances .....</b>	<b>452</b>
<b>Explosives .....</b>	<b>452</b>
<i>Types of explosives .....</i>	<i>454</i>
<i>Chemistry of explosives.....</i>	<i>455</i>
Oxygen balance .....	456
<i>Initiation and ignition.....</i>	<i>457</i>
Self-heating, stability in storage, and exposure to heat.....	457
Impact and shock.....	459
Flames .....	464
Radiant heating.....	465
Hot bodies in contact.....	465
Friction .....	466
Compression.....	466
Electricity .....	466
Light energy and ionizing radiation.....	468
Crystal growth .....	469
RF initiation.....	469
<i>Modeling detonation .....</i>	<i>469</i>
<i>Ignition of air/fuel-gas atmospheres by condensed-phase explosives.....</i>	<i>470</i>
<i>Variables affecting the behavior of explosives.....</i>	<i>470</i>

## Chapter 11. Characteristics of external ignition sources

<b>Highlights and summary of practical guidance</b> .....	<b>498</b>
<b>Introduction</b> .....	<b>499</b>
<b>High ambient temperatures</b> .....	<b>499</b>
<b>Hot solids or liquids</b> .....	<b>499</b>
<i>Large hot surfaces in contact—Theory</i> .....	500
<i>Small hot objects—Theory</i> .....	500
<i>Airborne burning objects (flying brands)</i> .....	500
Ignition of buildings.....	501
Ignition of wildland fires.....	503
Prediction of spotting distances .....	503
<i>Exhaust particles</i> .....	505
<i>Welding spatter</i> .....	506
<i>Brands ejected from fireplace</i> .....	507
<i>Friction and mechanical sparks</i> .....	507
General principles .....	507
Ignition of flammable gas atmospheres .....	509
Ignition of dust clouds and layers of porous materials.....	515
<b>Shock, impact, pressure, vibration</b> .....	<b>517</b>
<i>Shock and impact</i> .....	517
Dropped objects.....	517
High-velocity impacting particles (unheated) .....	517
<i>Pressure (compression ignition)</i> .....	517
<i>Vibration</i> .....	518
<b>Flames or remote objects</b> .....	<b>518</b>
<i>Small burner flames and small burning objects</i> .....	518
<i>Larger flaming sources and burners</i> .....	519
Kitchen sources.....	519
Large laboratory burners.....	519
<i>Jets and high velocity burners</i> .....	519
<i>Solid-fuel ignition sources</i> .....	520
<i>Burning fabrics</i> .....	520
<i>Burning furniture</i> .....	520
<i>Large burning objects</i> .....	521
Liquid pools , wood cribs.....	521
Fireballs and jet flames .....	524
Burning buildings.....	527
Burning forests and vegetation.....	531
<i>Burning vehicles</i> .....	532

## Chapter 14. Information on specific materials and devices

<b>Introduction</b> .....	<b>683</b>
<b>Accelerants in incendiary fires</b> .....	<b>683</b>
<b>Acetylene and related compounds</b> .....	<b>683</b>
<b>Aerosol cans</b> .....	<b>687</b>
<b>Agricultural products</b> .....	<b>687</b>
<i>Self-heating</i> .....	<i>687</i>
<i>Electrostatic properties</i> .....	<i>688</i>
<b>Air compressors and compressed air systems</b> .....	<b>688</b>
<b>Aircraft cabin wall panels</b> .....	<b>691</b>
<b>Airplanes</b> .....	<b>691</b>
<b>Alcoholic beverages</b> .....	<b>691</b>
<b>Aldehydes</b> .....	<b>691</b>
<b>Ammonia</b> .....	<b>692</b>
<b>Ammonium nitrate and ANFO</b> .....	<b>692</b>
<b>Ammonium perchlorate</b> .....	<b>694</b>
<b>Antifreeze</b> .....	<b>696</b>
<b>Arsenic compounds</b> .....	<b>696</b>
<b>Ashes</b> .....	<b>696</b>
<b>Asphalt</b> .....	<b>696</b>
<b>Automatic transmission fluid</b> .....	<b>696</b>
<b>Aviation fuels</b> .....	<b>696</b>
<b>Azides</b> .....	<b>700</b>
<b>Bagasse and bagasse products</b> .....	<b>700</b>
<b>Boranes</b> .....	<b>701</b>
<b>Boron</b> .....	<b>702</b>
<b>Brake fluid</b> .....	<b>702</b>
<b>Calcium resinate</b> .....	<b>703</b>
<b>Camping fuel</b> .....	<b>703</b>
<b>Candles</b> .....	<b>703</b>
<i>Tea candles</i> .....	<i>704</i>
<i>Gel candles</i> .....	<i>705</i>
<b>Carbon disulfide</b> .....	<b>705</b>
<b>Carbon monoxide</b> .....	<b>705</b>
<b>Cellulose</b> .....	<b>705</b>
<b>Cellulose insulation</b> .....	<b>706</b>
<b>Cellulose nitrate, Celluloid, pyroxylin</b> .....	<b>708</b>
<b>Charcoal, coke, and related products</b> .....	<b>711</b>
<i>Charcoal</i> .....	<i>711</i>
<i>Charcoal briquettes</i> .....	<i>712</i>
<i>Coke</i> .....	<i>713</i>
<i>Activated charcoal</i> .....	<i>713</i>
<i>Activated carbon</i> .....	<i>715</i>

<b>Chimneys and flues</b> .....	<b>715</b>
<b>5-Chloro-1,2,3-thiadiazole</b> .....	<b>716</b>
<b>Christmas trees, artificial</b> .....	<b>716</b>
<b>Cigarettes and cigars</b> .....	<b>717</b>
<b>Clothes irons</b> .....	<b>720</b>
